

ABC Solution

Applus is a leading provider of vehicle emissions testing products and services to public and private organizations.

State and local governments rely on Applus for the development and ongoing management of comprehensive testing programs while many private firms turn to Applus for innovative and reliable testing equipment, software and systems.

Applus is now part of an international company, Applus Servicios Tecnológicos, with more than \$1 billion in annual revenue. The Applus group provides vehicle emissions and safety inspection expertise, services and products across the U.S. and in more than 55 countries. Applus testing solutions range from comprehensive emissions testing programs—including design, engineering, development, implementation and ongoing program management—to providing component software, hardware and/or testing equipment.

Applus has successfully developed, implemented and managed all three types of inspection programs—centralized, decentralized and hybrid. In the U.S., Applus delivered testing programs in the states of Connecticut, Georgia, Illinois, Massachusetts, Rhode Island, Utah and Washington. Applus has also provided an extensive selection of equipment and services in most other states, from a partial implementation to a full implementation of the inspection program.

ABC Solution

For Program Administrators faced with the responsibility of obtaining additional SIP credits for their I/M program, or for those looking for assistance in just select areas, Applus provides a flexible menu solution with our Applus Basic Component Solution (ABC Solution).

Applus understands that some customers may require only minimal changes to their state-managed I/M program. For these customers, Applus offers an “elementary” approach: a menu of stand-alone I/M products and services that complement existing components of an I/M program, at a low cost.

The ABC Solution gives Program Administrators the flexibility to add or remove I/M services and products as it suits the local needs and requirements for additional SIP credits. With a multitude of menu options and shorter contract terms, the ABC Solution is the ultimate choice for simple and flexible customization and, upon implementation, is managed and/or operated by the local Program Administrator

The menu selection of á la carte I/M products and services include:

- EPA Modeling Assistance
- EPA SIP Plan Assistance
- Inspection System Specification Assistance
- Generic Vehicle Inspection Databases
- State Specific Vehicle Inspection Databases
- Inspection Program Web-Based InformationDashboards
- Inspection Emissions Analyzers
- Inspection OBDII Analyzers
- Self Inspection Kiosks
- State Specific Vehicle Inspection Software
- Acceptance Test Procedure Services
- Wireless and Remote OBDII Units
- Overt/Covert/Quality Auditing Assistance
- Inspector Training and Certification
- Repair Industry Training
- Web-based Scheduling Applications
- Station Management and Operation
- Troubleshooting of Current Inspection Program
- Problems (i.e., such as too many readiness failures, etc.)
- Automated Fee Collection
